Is the Human still central or is AI replacing the human Role?

Artificial intelligence (AI) is changing our world – in the workplace, in medicine, in education, and even in art. But what does this mean for humans? Will we remain the shapers of our future, or will we increasingly be displaced by algorithms?

In this seminar, we explore the question of whether humans will continue to be at the center of technological developments – or if AI is taking over this role. We examine ethical, social, and philosophical aspects and discuss the opportunities and risks of digital transformation.

Participants should develop a reflective understanding of the role of humans in the age of AI and be able to formulate their own positions on the challenges and possibilities.

We look forward to your participation!
